

Persian Santur V2 Update

This update of the Persian Santur is compatible with the full version of NI Kontakt 3 and 4.

Articulation:

Pull-down menu with the available articulations, the name of the selected articulation is visible. Articulations can also be selected by keyswitch.

Santur 1 = C1

Santur 2 = C#1

Round Robin = D1 (Round Robin between Santur 1 and 2)

Clusters = D#1

Plectrum Gliss = E1

KeyRoll Gliss = F1

Sticks Gliss = F#1

Hits = G1

Tremolo control:

Rate knob with different host tempo synced speeds from 1/4 to 1/64 and a Free mode that activates the Speed knob (on the right), so you can dial in a free tempo not dependent on the host.

Tremolo On/Off button, also controllable by keyswitch G#1 (on), A1 (off), and Sustain Pedal (CC64)

Accelerate/Decelerate mode button, also controllable by keyswitch A#1 (accelerate) and B1 (decelerate).

The Accelerate/Decelerate effect determines the effect of the modwheel (CC1) on the tremolo. Therefore, it only works if the Tremolo is on.

Tremolo Humanize:

Timing, Velocity and Tuning knobs where 0% is no effect and 100% is maximal effect.

Tweak these knobs to get more or less perfection in the tremolos.
